

TEST-ATHIPLAINS-01

9.88 acres (our measurement) · Soil validation

70 / 100 — Fair Best for building a home.

The overall figure is the best of the four, not their average. Land is bought for a purpose.

The four things people ask

Can I build a house here?

We can't tell you yet

The soil maps read this ground as ordinary clay, but flat land in this part of Kenya is often black cotton and our data cannot tell the two apart here.

What this means for you

Do not agree a building budget until a soil test is done. Black cotton can add a lot to what the foundation costs.

We can't be sure — see the checklist.

Can I farm it?

Only with water

Rain is low — about 587 mm a year.

What this means for you

You would need a borehole or a dam for anything beyond drought-hardy crops or grazing.

We're fairly confident about this.

Will it flood?

Mostly fine, part of it is not

Most of the plot is on safe ground, but a lower part could take water in heavy rain. The plot as a whole reads low.

What this means for you

Do not put the house on the low ground. Walk the plot after heavy rain if you can.

We're fairly confident about this.

Is this area growing?

Yes, and quickly

Lights at night here have been increasing fast, which is what happens when people build.

What this means for you

This area is on the way up. That usually shows in land prices.

We're fairly confident about this.

What is nearby

Main road	7 min walk	553 m away
Mobile network mast	7 min walk	559 m away
Tarmac road	5 min drive	3.2 km away
Primary school	5 min drive	3.2 km away
Secondary school	7 min drive	4.4 km away
Clinic	9 min drive	6.1 km away
Hospital	9 min drive	6.1 km away
Water point	11 min drive	7.1 km away
River (a limit on where you can build, not a convenience)	2 min walk	161 m away

Straight-line distance to the nearest mapped feature, not road distance. Health facilities are recorded at the centre of their ward rather than at the building, so treat those as approximate.

Before you pay

1. Get a soil test. This is the important one.

Ask for a test that says whether the soil is expansive or black cotton. Do it before you agree a building budget.

2. Ask neighbours how high the water came last season

Our flood reading is worked out from the shape of the land. It cannot see a blocked drain or a broken dike.

3. Find out where water will come from

We found no mapped water point close to this plot.

4. Confirm the boundary with a licensed surveyor

Our measurements come from maps, not from beacons on the ground.

5. Have your advocate do an official search at the Lands office

We do not check ownership, charges or disputes. Nothing in this report is a substitute for that search.

How we worked this out, and what this report is not

Everything here is measured from satellite images, terrain, rainfall records and public datasets. Nobody from our team has stood on this land. This is not a valuation and not a legal opinion. It does not confirm who owns the land or where its legal boundary runs. Flood risk is worked out from the shape of the land, not from flood records. It cannot see a broken dike or a blocked drain. Always visit the plot and use an advocate and a licensed surveyor before you pay any money.
