

TEST-KAREN-01

2.00 acres (our measurement) · Flood validation

98 / 100 — Good Best for building a home.

The overall figure is the best of the four, not their average. Land is bought for a purpose.

The four things people ask

Can I build a house here?

We can't tell you yet

The soil maps read this ground as ordinary clay, but flat land in this part of Kenya is often black cotton and our data cannot tell the two apart here.

What this means for you

Do not agree a building budget until a soil test is done. Black cotton can add a lot to what the foundation costs.

We can't be sure — see the checklist.

Can I farm it?

Yes, for most crops

Rain is reliable — about 952 mm a year, enough for maize without irrigation.

What this means for you

Good for a kitchen garden, fruit trees or a small shamba.

We're fairly confident about this.

Will it flood?

No flooding expected

The whole plot sits on ground that sheds water rather than collecting it.

What this means for you

Flooding is not a concern here.

We're fairly confident about this.

Is this area growing?

Yes, and quickly

Lights at night here have been increasing fast, which is what happens when people build.

What this means for you

This area is on the way up. That usually shows in land prices.

We're fairly confident about this.

What is nearby

On the land itself: main road — this crosses the plot rather than sitting near it.

Mobile network mast	1 min walk	45 m away
Tarmac road	6 min walk	511 m away
Primary school	9 min walk	741 m away
Secondary school	10 min walk	840 m away
Clinic	4 min drive	2.5 km away
Water point	4 min drive	2.8 km away
Hospital	5 min drive	3.1 km away
River (a limit on where you can build, not a convenience)	8 min walk	625 m away

Straight-line distance to the nearest mapped feature, not road distance. Health facilities are recorded at the centre of their ward rather than at the building, so treat those as approximate.

Before you pay

1. Get a soil test. This is the important one.

Ask for a test that says whether the soil is expansive or black cotton. Do it before you agree a building budget.

2. Confirm the boundary with a licensed surveyor

Our measurements come from maps, not from beacons on the ground.

3. Have your advocate do an official search at the Lands office

We do not check ownership, charges or disputes. Nothing in this report is a substitute for that search.

How we worked this out, and what this report is not

Everything here is measured from satellite images, terrain, rainfall records and public datasets. Nobody from our team has stood on this land. This is not a valuation and not a legal opinion. It does not confirm who owns the land or where its legal boundary runs. Flood risk is worked out from the shape of the land, not from flood records. It cannot see a broken dike or a blocked drain. Always visit the plot and use an advocate and a licensed surveyor before you pay any money.
