

TEST-KERICHO-01

158 acres (our measurement) · Rainfall validation

95 / 100 — Good Best for building a home.

The overall figure is the best of the four, not their average. Land is bought for a purpose.

The four things people ask

Can I build a house here?

Yes

The ground is workable and we found no flooding risk and no river reserve on it.

What this means for you

You can build here. Still get a soil test and confirm the boundary — see the checklist.

We're fairly confident about this.

Can I farm it?

Yes — this is good growing land

Heavy, reliable rain of about 2,101 mm a year.

What this means for you

Proper farming land. If it also floods, that is the same water that makes the soil rich — plan for it rather than against it.

We're fairly confident about this.

Will it flood?

No flooding expected

The whole plot sits on ground that sheds water rather than collecting it.

What this means for you

Flooding is not a concern here.

We're fairly confident about this.

Is this area growing?

Yes, steadily

There is real growth in night-time lights, but not at the pace of the fastest peri-urban areas.

What this means for you

Steady area. Buy for what you will use it for, not for a quick rise.

We're fairly confident about this.

What is nearby

On the land itself: main road, tarmac road, primary school, mobile network mast — these cross the plot rather than sitting near it.

Secondary school	1 min walk	89 m away
Clinic	10 min walk	834 m away
Hospital	10 min walk	834 m away
Water point	25 min drive	16.5 km away
River (a limit on where you can build, not a convenience)	4 min walk	340 m away

Straight-line distance to the nearest mapped feature, not road distance. Health facilities are recorded at the centre of their ward rather than at the building, so treat those as approximate.

Before you pay

1. Find out where water will come from

We found no mapped water point close to this plot.

2. Confirm the boundary with a licensed surveyor

Our measurements come from maps, not from beacons on the ground.

3. Have your advocate do an official search at the Lands office

We do not check ownership, charges or disputes. Nothing in this report is a substitute for that search.

How we worked this out, and what this report is not

Everything here is measured from satellite images, terrain, rainfall records and public datasets. Nobody from our team has stood on this land. This is not a valuation and not a legal opinion. It does not confirm who owns the land or where its legal boundary runs. Flood risk is worked out from the shape of the land, not from flood records. It cannot see a broken dike or a blocked drain. Always visit the plot and use an advocate and a licensed surveyor before you pay any money.
