

TEST-TANADELTA-01

200 acres (our measurement) · Flood validation

This plot is not for sale as far as we can tell

This parcel intersects a gazetted protected area. Land inside one is normally not saleable, so a score would invite a comparison that should never be made.

What is nearby

On the land itself: primary school, river — these cross the plot rather than sitting near it.

Main road	1 min walk	38 m away
Mobile network mast	15 min walk	1.2 km away
Clinic	12 min drive	7.9 km away
Secondary school	21 min drive	14.1 km away
Tarmac road	24 min drive	15.8 km away
Hospital	36 min drive	23.8 km away

Straight-line distance to the nearest mapped feature, not road distance. Health facilities are recorded at the centre of their ward rather than at the building, so treat those as approximate.

Before you pay

- 1. Ask the seller for written proof this land can be sold**
Our data places it inside a protected area. Do not pay anything before you have seen this.
- 2. Ask the county where the river reserve runs**
You cannot build inside it. A surveyor can mark it on the ground.
- 3. Have a builder price the foundation for black cotton**
So the cost is known before you pay for the land.
- 4. Ask neighbours how high the water came last season**
Our flood reading is worked out from the shape of the land. It cannot see a blocked drain or a broken dike.
- 5. Find out where water will come from**
We found no mapped water point close to this plot.
- 6. Confirm the boundary with a licensed surveyor**
Our measurements come from maps, not from beacons on the ground.
- 7. Have your advocate do an official search at the Lands office**
We do not check ownership, charges or disputes. Nothing in this report is a substitute for that search.

How we worked this out, and what this report is not

Everything here is measured from satellite images, terrain, rainfall records and public datasets. Nobody from our team has stood on this land. This is not a valuation and not a legal opinion. It does not confirm who owns the land or where its legal boundary runs. Flood risk is worked out from the shape of the land, not from flood records. It cannot see a broken dike or a blocked drain. Always visit the plot and use an advocate and a licensed surveyor before you pay any money.

Copernicus GLO-30. Rainfall from CHIRPS. Soils from SoilGrids and iSDAsoil.
